

Cross Currency Swap – FCY to INR

This Product Disclosure Statement is in reference to RBI Circular dated 16.09.2021, Master Direction – Reserve Bank of India (Market-makers in OTC Derivatives) Directions, 2021.

This document contains standard information about the product which may enable the user to determine if the product will meet its hedging needs and to facilitate comparison with other products.

Features

In a cross currency swap, the user exchanges one currency cash flows (principal and coupon) for another currency cash flows (principal and coupon) as per defined schedule. In this derivative transaction, user converts the Fixed/ Floating FCY liability to a Fixed/ Floating INR liability. Under this transaction, user undertakes to pay INR principal and coupon and receive FCY principal and coupon on the respective settlement dates which in turn can be used to repay FCY liability. The user pays a cost which is a percentage of the outstanding INR notional and in return receives FCY coupon on the outstanding FCY notional. The principal exchange happens at a spot reference rate decided at the initiation of the swap.

Illustration:

For an underlying floating rate liability in USD where INR is domestic currency.

The underlying exposure for this product is an USD liability. User undertakes this transaction to convert the principal and coupon of this floating rate USD liability to a fixed rate INR liability. By entering into this transaction, user would look to protect itself with the risk of INR depreciation against USD on the principal and interest portion of the USD liability.
